Editorial Policy

The JFE Group CSR Report 2013 presents the basic policy, activities and achievements in FY2012 in terms of environmental and responsibility activities related to the businesses conducted by JFE Holdings, Inc., the holding company of the JFE Group, and its operating companies. The report was edited and produced in accordance with the Guidelines for Environmental Reports (2012 edition) issued by Japan’s Ministry of the Environment and the Sustainability Reporting Guidelines Version 3.0. of the Global Reporting Initiative (GRI).

Organizations Covered in the Report
• Holding company:
  JFE Holdings, Inc.
• Operating companies of JFE Group:
  JFE Steel Corporation, JFE Engineering Corporation, JFE Shoji Trade Corporation
  *Includes some descriptions pertaining to Group companies organized under each business company.
  (359 companies, of which 296 are consolidated subsidiaries and 63 are equity method affiliates)

Reporting Period
The CSR Report 2013 mainly covers activities carried out in FY2012 (April 1, 2012 to March 31, 2013), but also describes selected activities that occurred before or after this period.

CSR Report Composition and Media

This version contains reader-friendly summaries supported with visuals about the most noteworthy activities in the CSR Report.

In addition to highlight version content, this version of the report includes more detailed data for all stakeholders.

Three Core Businesses Supporting Sustainability

The JFE Group’s core businesses of steelmaking, engineering and trading support sustainable societies with energy and resource-recycling technologies that have been developed over many years.

Steel Business
- Development of high-performance steel materials and energy-conserving products and technologies
- Global introduction of energy-saving technologies
- Steel recycling

Steelmaking

Trading Business
- Introduction of products for reduced environmental loads and energy consumption
- Energy-saving shipping
- Steel scrap recycling
- Renewable energies

Overseas steel scrap recycling

Processing

Urban development

Engineering Business
- Urban environment plants
- Renewable energies
- Infrastructure construction
- Waste recycling

Waste recycling

JFE in Society

- Urban environment plants
- Renewable energies
- Infrastructure construction
- Waste recycling
## Opportunities and Solutions

### Businesses and Core Products

#### Steel Business

**“Only One” and “Number One” Products for Global Markets**

JFE Steel, one of the world’s leading integrated steel producers, operates a highly competitive production system consisting of two major steelworks, one each in eastern and western Japan. The company’s “Only One” and “Number One” branded products and other value-added offerings reflect JFE Steel’s sophisticated technologies and development capabilities.

#### Engineering Business

**Innovative Technologies for Energy and the Environment**

JFE Engineering technologies enhance the effective use of resources for clean energy in the core businesses of urban-based infrastructure and energy. JFE Engineering boasts specialized expertise in industrial machinery and steel structures such as bridges.

#### Trading Business

**Creating Value as the Core Trading Company**

JFE Shoji Trade engages in trading in Japan and the import and export of products centering on steel materials, as well as steel raw materials, non-ferrous metals, chemicals, fuels, materials and machinery, and marine vessels. The company also has business in the foods and electronics fields.

### Opportunities

- CO2 emissions reduction
- Energy conservation
- Resource conservation
- Biodiversity preservation
- Electrical power shortage countermeasures
- Post-earthquake reconstruction
- Promotion of diverse human resources

### Solutions

- Commercialization of “eco-processes”
- Advanced energy-conserving technologies and equipment for reduced CO2 emissions in production processes
- Development of “eco-products”
- High-performance steel materials for final products that help to conserve energy
- Worldwide deployment of “eco-solutions”
- Deployment and transfer of world-leading technologies for CO2 emissions reduction
- Steel slag technologies for restoring marine environments
- IPP and in-house power generation to supplement electric power supply in society
- Proactive recruitment of female and foreign employees

### Steel Business

- Steel products, titanium products, processed steel products, chemical products, steel slag products, formed material products, containers, mining and mineral products, functional materials, iron alloys, refractories, furnace construction, civil engineering, equipment management and construction, electrical construction, telecommunications construction, thermal power generation, gas, temporary construction materials, property development, insurance sales, steel structures, etc.

### Engineering Business

- Energy
  - Power generation plants, energy plants, energy-efficient air conditioning, EV systems, pipelines and control systems
- Urban environments
  - Urban environment facilities, aqua, biomass, operations and maintenance services
- Steel structures
  - Bridges, coastal structures and rail welding
- Industrial machinery
  - Logistics, distribution systems, marine machinery and shield machines

### Trading Business

- Steel products, solvents, iron powder, processed steel products, steelmaking materials/equipments, non-ferrous metal products, chemical products, petroleum products, paper products, ships, civil engineering and construction work, iron ore mining, canned foods, agricultural and livestock products, fishery products, semiconductor products and real estate
The JFE Group develops technologies and products for safe and secure urban development, including protection from earthquakes and tsunamis.

**Products and Technologies for Coastal Areas**

**Safe and Secure Urban Development**

**New Rapid Deployment Solutions for Tsunamis**

**Hybrid Tide Embankments**

Precast hybrid tide embankments can be rapidly implemented to strengthen protection from tsunamis in coastal communities. This solution significantly shortens the construction period because it does not require large amounts of materials or manpower onsite.

**Steel Sheet Piling and Steel Pipe Lagging**

These products are used in seismic retrofitting and restoration construction, including anti-liquefaction construction, seawall reinforcement and storm surge barriers.

**Seawalls and Quays Strengthened for Earthquakes**

**Steel Sheet Piling and Steel Pipe Lagging**

**Seawalls and Quays Strengthened for Earthquakes**

**Steel Sheet Piling and Steel Pipe Lagging**

These products are used in seismic retrofitting and restoration construction, including anti-liquefaction construction, seawall reinforcement and storm surge barriers.

**Breakwater Walls**

JFE has applied technologies developed originally to manufacture bridge beams and building frames to create the world’s largest breakwater walls, which now provide nuclear power plants and other important facilities with protection from giant tsunamis.

**Steel Slag Compaction Piles**

Tightly arranged groups of slag piles are placed in the ground to prevent liquefaction. The use of slag results in piles that are stronger than those made from natural sand.

**Reduced Cost Restoration of Damaged Piers**

**Jacket Piers**

This restoration method constructs a jacket-like structure around the still functional steel pipe piles of the damaged pier for economical restoration requiring less than half the normal fieldwork of building a new concrete pier.

**Ground Strengthening to Prevent Liquefaction**

**Steel Slag Compaction Piles**

Tightly arranged groups of slag piles are placed in the ground to prevent liquefaction. The use of slag results in piles that are stronger than those made from natural sand.

**Powerful Breakwaters**

**Hybrid Caisson**

These hybrid structures combine plant-fabricated box-type steel frames surrounded with concrete. Compared to conventional concrete, this lightweight structure facilitates size increases and field work process reductions.

**Jacket Piers**

This restoration method constructs a jacket-like structure around the still functional steel pipe piles of the damaged pier for economical restoration requiring less than half the normal fieldwork of building a new concrete pier.

**Resource-Conserving Mannmade Rocks**

**Marine Rocks®**

Mannmade rocks produced with solidified steel slag, called Marine Rocks®, are used as seawall materials for earthquake reconstruction work in areas where natural construction materials are in short supply.

**Ground Strengthening to Prevent Liquefaction**

**Steel Slag Compaction Piles**

Tightly arranged groups of slag piles are placed in the ground to prevent liquefaction. The use of slag results in piles that are stronger than those made from natural sand.

**Reduced Cost Restoration of Damaged Piers**

**Jacket Piers**

This restoration method constructs a jacket-like structure around the still functional steel pipe piles of the damaged pier for economical restoration requiring less than half the normal fieldwork of building a new concrete pier.

**Powerful Breakwaters**

**Hybrid Caisson**

These hybrid structures combine plant-fabricated box-type steel frames surrounded with concrete. Compared to conventional concrete, this lightweight structure facilitates size increases and field work process reductions.

**Jacket Piers**

This restoration method constructs a jacket-like structure around the still functional steel pipe piles of the damaged pier for economical restoration requiring less than half the normal fieldwork of building a new concrete pier.
High Rises that Withstand Major Earthquakes

Disaster Resistant Foundations for Buildings

Highly earthquake resistant buildings can be designed with vibration dampening systems and special steel materials for high-strength construction. As a result, damage to large structures can be minimized during earthquakes of the most powerful strength or massive tsunamis and their resulting backwash.

Terre Armée Civil Engineering Method

This method involves using steel to reinforce earth layers and construct banks with vertical walls, after which earth is heaped on top of each layer and tamped down with rollers or other tools. Attributes include earthquake- and disaster-resistance, flexible configurations and resulting landscapes that are visually attractive.

High-strength steel materials

Vibration damper

Putting Iron Byproducts to Work

Iron-Steel Slag Landfill

Iron-steel slag can be used to raise the ground levels of coastal communities as one countermeasure against tsunamis.

Reliable Water Conveyance in Seismically Active Areas

Steel Water Pipes that Shift with Faults

Steel water pipes designed to prevent cracking or leaking are equipped with bellows that enable bending in the direction of a major slip along an active fault, ensuring that water continues to be conveyed even after an earthquake.

Ensure Reliable Power Supply During Emergencies

Engine Power Generators

The JFE Group offers a full lineup of high-performance generators designed to continue supplying electrical power during emergencies, even when electrical, water and other services are interrupted.

High-Performance, Environmentally Friendly Piles

Tsubasa Piles™

Highly earthquake resistant steel pipe foundation piles are fitted with a toe wing at their tip to screw into the ground for simplified, reduced cost excavation. Environmentally friendly, the piles eliminate the need for earth removal while enabling low-vibration, low-noise construction.

Landslide Prevention Construction

Steel Piles

Steel-pile barriers can be used to effectively prevent landslides on sloped land, helping to save lives in nearby communities.

Putting Iron Byproducts to Work

Iron-Steel Slag Landfill

Iron-steel slag can be used to raise the ground levels of coastal communities as one countermeasure against tsunamis.

Reliable Water Conveyance in Seismically Active Areas

Steel Water Pipes that Shift with Faults

High-Performance, Environmentally Friendly Piles

Tsubasa Piles™

Highly earthquake resistant steel pipe foundation piles are fitted with a toe wing at their tip to screw into the ground for simplified, reduced cost excavation. Environmentally friendly, the piles eliminate the need for earth removal while enabling low-vibration, low-noise construction.

Landslide Prevention Construction

Steel Piles

Steel-pile barriers can be used to effectively prevent landslides on sloped land, helping to save lives in nearby communities.
Disaster Waste Disposal

Disposal of the massive amount of earthquake-generated waste covering the damaged areas was essential for quick reconstruction. JFE Engineering, an expert in urban environment plant technologies and operations, led a highly successful effort to resume operations at a badly damaged incinerator in Sendai. The plant was restarted just six months after the disaster, an astonishing speed for such a facility. The company then helped to set up incinerators in three other locations in Miyagi Prefecture, where approximately one-third of the disaster waste in the prefecture has been incinerated as of the end of FY2012.

Volunteer Activities

JFE Shoji Trade recruited employees to volunteer for dispatch to stricken areas on nine different occasions beginning in August 2011. The volunteers helped to sort and remove debris from retirement homes, residences, farms and fishing ports in Oshika-cho and Minami-Sanriku-cho, Miyagi Prefecture. Schedules, transportation and lodging were arranged by the company in support of the volunteer work. Participation totaled more than 110 employees, ranging from new hires to executive officers.

Slag for Port Construction in Iwaizumi-cho

To facilitate the quick reconstruction of Omoto Port in Iwaizumi-cho, Iwate Prefecture, where the harbor was effectively destroyed, JFE Steel donated granulated slag as a key construction material. Rebuilding is currently in process.

Comment from the Mayor of Iwaizumi-cho

Katsumi Date
Mayor, Iwaizumi-cho

The damage to Omoto Port was extreme, completely shutting down its function as a harbor. The quick restoration of Omoto Port is indispensable for our town’s reconstruction. I am very thankful for and encouraged by this level of support, which enables us to move forward with reconstruction and restoration. I deeply appreciate these efforts.

Matsushima Bay Seaweed Restoration

To restore the Matsushima Bay seaweed beds destroyed by the tsunami, JFE Steel is collaborating with Tohoku University, fisheries cooperatives and other regional organizations to test the use of Marine Rocks®, Marine Blocks® and Marine Stones® as artificial reefs.

Donations

The JFE Group has contributed ¥100 million in relief money to Miyagi, Iwate, Fukushima, Aomori and Ibaraki prefectures to support rescue and reconstruction activities in disaster-stricken areas.

Field mustard, which have a desalinating effect, is being planted to restore the soil quality of fields inundated with seawater.
JFE Products for Ecological Societies

Longitudinally profiled (LP) steel plates offer variegated lengthwise thicknesses that can be tailored to specific strength requirements, enabling designs that minimize wasteful use of unnecessary steel. The result is structures that offer reduced environmental impact as well as lower construction costs.

Super Core®

JFE Super Core® steel sheets containing 6.5% silicon offer superior high-frequency characteristics for use in photovoltaic power generators and hybrid car power-supply components. These sophisticated, one-of-a-kind electromagnetic steel plates contribute to energy efficiency, downsizing and reduced noise in converting direct and alternating current.

HITEN

HITEN high-strength steel panels for automobile exterior panels, suspension components and frame parts significantly help to lighten vehicle weights and reduce CO2 emissions.

Making a Difference in Lightweight Vehicles

13Cr

In natural gas fields, high levels of CO2 can corrode conventional carbon steel oil country tubular goods (OCTG), raising the risk of environmental contamination due to well degradation. 13Cr is a stainless high-strength material for OCTG that resists CO2 corrosion, helping to reduce the environmental impact of natural gas development.

On Board Systems that Help Protect the Oceans

Ballast Water Treatment

Ships take on seawater (ballast water) at landing ports to maintain their balance after cargo has been offloaded. The seawater contains local marine organisms that can disrupt unrelated marine ecosystems when discharged in distant oceans. JFE Ballast Ace is a water treatment system that purifies ballast water for safe discharge by eliminating its organic content.

Promoting Greater Use of Bicycles

Cycle Tree

Fully automatic, multilevel parking systems enable space-saving solutions for parking and retrieving bicycles in confined areas, such as near to urban train stations. CYCLE TREE not only eliminates the problem of illegal parking around train stations, it also promotes the use of bicycles for green commuting.

Reducing Energy Consumption

Efficient Distribution Systems

Steel products for construction stored in warehouses, formerly transported independently by Group companies, are now consolidated in joint deliveries covering overlapping routes. By sharing warehouse information among Group companies, we have raised the efficiency of our transport activities while reducing energy consumption.

Seismic Retrofitting of Buildings

Vibration Dampers

Vibration dampers are components that can be incorporated in the design of existing buildings to strengthen their resistance to earthquakes. The steel pipe brace, a vibration damper developed by JFE, won the 45th Ichimura Industrial Award Contribution Prize in 2012.
Low-CO2 Sintering Technology

Super-SINTER®

Improved sintered ore quality and significant energy conservation can be achieved with Super-SINTER®. In fiscal 2012, JFE Steel successfully reduced CO2 emissions by introducing this technology at all relevant company facilities.

Biomass Fuels

JFE has developed circulating fluidized bed boilers that are able to use a range of fuels, including biomass, waste plastic, scrap tires and old sludge. Biomass boilers use natural biomass fuels, particularly scrap wood, for carbon-neutral combustion that results in a net zero gain in CO2 emissions.

Power Generated with Carbon-neutral Palm Kernel Shells

Palm Kernel Shells are a carbon-neutral fuel that show promise as a power-generation fuel of the future. JFE Shoji Trade, anticipating the growing demand for this new fuel, became the first Japanese trading company to establish a cargo yard for Palm Kernel Shells in Malaysia in 2010.

Earth Energy System for Efficient Cooling and Heating

GeoTOPIA®

Based on the principal that underground temperatures in a given location tend to maintain the local area’s mean annual atmospheric temperature, the GeoTOPIA® air conditioning system uses moderate subterranean temperatures to cool air in the summer and warm air in the winter. By utilizing this natural phenomenon, the system consumes less energy than conventional air conditioning systems.

Using the Earth’s Heat in Low-temperature Regions

Geothermal Binary Power Generation

JFE is developing a system to generate power with turbines driven by the boiling of low-boiling-point fluids using geothermal heat. This highly efficient system wastes neither cold vapor nor hot water, an unprecedented accomplishment for geothermal power generation.

Innovative Steelmaking Process

COURSE50

As a core member of COURSE50*, an industry-wide technological project aimed at reducing CO2 emissions from blast furnaces, JFE Steel is helping to develop ASCOA-3, which are CO2-separation technologies derived from the pressure swing adsorption (PSA) process at its Fukuyama facility, and technologies to recover waste heat contained in steel slag at its Chiba facility.

* COURSE50: CO2 Ultimate Reduction in Steelmaking process by Innovative technology for cool Earth 50

Energy Conversion using Natural Materials

Biomass Boilers

Ferro-Cokes

Ferro-cokes are an innovative new blast furnace feed exhibiting the potential to significantly reduce CO2 emissions. In fiscal 2012, verification tests were completed at a pilot plant in the Keihin area. Ongoing development efforts are targeting practical application of this promising new feed.

Blast Furnace Feed for Reduced CO2 Emissions
Applying Green Technologies and Products Worldwide

This system recovers waste heat generated during cement manufacturing to drive turbines in electric power generators. JFE's delivery of the system to the world's largest cement manufacturer is a successful example of environmental investment by the Group.

Italy

Gasifying and Melting Furnaces
High-temperature gasifying and direct melting, a proprietary technology developed by the JFE Group, leverages core steelmaking processes for the disposal of rubbish. Valued for its high efficiency and stable operation, the technology will be introduced in a rubbish incineration plant in Rome.

India

Indian–Japanese Iron and Steel Industry Collaboration
The public and private collaborative meetings between Indian and Japanese iron and steel industry are bringing together governments and corporations from both countries to work on improving energy efficiencies in the Indian steel industry. JFE also continues to transfer technologies for energy saving to JSW Steel Ltd., India's largest steel corporation, and through its participation in research projects organized by Japan's semi-governmental New Energy and Industrial Technology Development Organization (NEDO).

Romania

Cement Waste Heat Recovery System
This system recovers waste heat generated during cement manufacturing to drive turbines in electric power generators. JFE's delivery of the system to the world's largest cement manufacturer is a successful example of environmental investment by the Group.

Thailand

ECOARC™
This environmentally friendly, high-efficiency arc furnace was installed at UMC Metals Ltd. in Thailand in February 2013 as a model project organized by Japan's New Energy and Industrial Technology Development Organization (NEDO).

Philippines

Sintering Furnace Waste Heat Recovery
JFE organized a clean development mechanism (CDM) project, as defined under the United Nation's Kyoto Protocol, to apply technology for the recovery of waste heat from a sinter cooler at Philippine Sinter Corporation, a wholly owned subsidiary.

Vietnam and Myanmar

Global Resource Circulation
JFE began exporting steel scrap to Vietnam for use as a recycled resource. Going forward, steel scrap will be sent to Myanmar and nearby countries via continued exports to Vietnam, helping to support these economies while furthering JFE's recycling initiatives.

United States

Regenerative Burners
JFE installed energy-saving, low-impact regenerative burners for materials heating furnaces at California Steel Industries, the largest steel company on the U.S. west coast.

Vietnam

Joint Crediting Mechanism Feasibility Study
The construction of large-scale blast furnace integrated steelworks is expected in Vietnam, where steel demand is growing rapidly. To ensure high-level energy conservation and environmental performance, JFE is examining the feasibility of introducing leading Japanese technologies.

Indonesia

Steam Supply Equipment for Geothermal Power Plants
In Indonesia, which has the world’s largest supply of geothermal resources, geothermal power generation is expected to expand tenfold. The JFE Group, in recognition of its superior design and construction technologies, is providing equipment that supplies steam from wellheads to power-generation plants.

Singapore

SkyPark
The SkyPark is an aerial garden that JFE helped to construct 200 meters off the ground atop three hotel towers in Singapore’s integrated resort, Marina Bay Sands. The country’s newest landmark not only offers spectacular views, it has become a unique space in the sky for urban relaxation.

Climate Action Program of worldsteel
JFE Steel is supporting global initiatives to reduce CO2 emissions through the Climate Action Program of the World Steel Association, which represents some 85% of global steel production. The program measures and calculates CO2 emissions from steelworks based on a common global method (ISO 14404).
Corporate Governance

The JFE Group is a holding company comprising three operating companies — JFE Steel, JFE Engineering and JFE Shoji Trade. JFE Holdings, the core of the Group’s integrated governance system, is responsible for Group-wide strategy, risk management and public accountability. Each operating company has developed its own system suited to its respective industry, ensuring the best course of action for competitiveness and profitability. The holding company and operating companies separately and collectively strive to maximize corporate value for shareholders and other stakeholders.

Managers

JFE Holdings added two external directors in 2007 to strengthen governance and enhance the fairness, objectivity and transparency of its management system. In addition, the term of directors was shortened from two years to one to strengthen responsibility. The Company’s Board of Directors, which comprises six directors including two external directors, supervises operational performance and efficiency. The Board of Auditors, which includes two external auditors, monitors operations to ensure financial soundness. JFE Holdings and the operating companies use the corporate officer system to separate decision making and execution for clarified authority and responsibility, as well as accelerated execution.

Corporate Governance Policy

JFE Holdings added two external directors in 2007 to strengthen governance and enhance the fairness, objectivity and transparency of its management system. In addition, the term of directors was shortened from two years to one to strengthen responsibility. The Company’s Board of Directors, which comprises six directors including two external directors, supervises operational performance and efficiency. The Board of Auditors, which includes two external auditors, monitors operations to ensure financial soundness. JFE Holdings and the operating companies use the corporate officer system to separate decision making and execution for clarified authority and responsibility, as well as accelerated execution.

Key Decision Making

Group companies make business decisions in accordance with their respective rules and procedures, whereas JFE Holdings makes decisions about Group-wide matters. Each operating company decides matters concerning the company and its affiliates through a deliberative process of meetings, etc., after which the board of directors renders its decisions. JFE Holdings employs this same procedure for matters important to its own company as well as operating companies and other Group businesses.

Optimized Business Systems

Businesses within the JFE Group utilize the best systems to optimize their products and operations, working to achieve unity between strategies and earnings.

| JFE Steel | Product-sector system |
| JFE Engineering | Business-sector system |
| JFE Shoji Trade | Sales-sector system |

Other

Technology development involving multiple Group businesses and IT initiatives is deliberated by Group-wide management bodies.

| JFE Group Technology Development Committee |
| JFE Group IT Committee |
Internal Controls

The JFE Group’s internal control system, which includes risk management, is governed by the Basic Policy for Building Internal Control Systems. Rules based on this policy govern organizational and operational matters, information storage and management, countermeasures against criminal groups, and meetings of bodies such as the Board of Directors, Management Committee and JFE Group CSR Council. A Corporate Ethics Hotline has also been established. To enhance corporate value, the internal control system’s implementation and performance are reviewed regularly to consider improvements wherever necessary.

Strengthening Internal Controls

Internal Audits

JFE Holdings, its principal operating companies and key Group companies had internal audit organizations comprising 164 people as of April 1, 2013. The organizations share information to enhance overall auditing within the Group.

Internal audit managers of principal operating companies serve concurrently as internal audit managers of JFE Holdings for stronger ties within the Group.

Audits by Corporate Auditors

JFE Holdings, operating companies and Group companies, in addition to undergoing statutory audits by elected officials acting alongside the board, implement various measures to enhance internal auditing by corporate auditors.

- A total of 43 full-time auditors have been appointed to 33 companies, including JFE Holdings.
- Operating company personnel are dispatched to Group companies as part-time external corporate auditors. Each absentee auditor serves three or four subsidiaries, meaning that six absentee auditors served 22 companies in total.
- The JFE Group Board of Auditors includes both full-time auditors of each Group company and absentee auditors. Subcommittees and working groups created to address specific issues meet autonomously throughout the year to share information, research issues and enhance understanding (see diagram). The results of their activities are presented at the General Meeting of JFE Group Auditors and are reflected in the activities of individual corporate auditors.

Structure of JFE Group Board of Auditors

Cooperation between Corporate and Accounting Auditors

The corporate auditors hold scheduled and unscheduled meetings (six in FY2012) with the external accounting auditor (Ernst & Young ShinNihon) in which the latter presents its audit plan, actual work and detailed results. The corporate auditors also receive detailed explanations regarding the accounting auditor’s quality management system, explain their own audit plans and other matters, and share opinions on related matters with the accounting auditor.

Cooperation between Corporate Auditors and Internal Auditing Department

The corporate auditors hold scheduled and unscheduled meetings (four in FY2012) with the internal auditing department in which the latter presents its internal audit plan, work status and detailed results. During the meetings the corporate auditors also share opinions with the department.

Operating Company Governance

To strengthen governance, JFE Holdings managers attend each operating company’s General Meeting of Shareholders and Management Planning Briefing, receive reports on their business activities, discuss managerial policies and engage in other forms of shareholder oversight as representatives of the holding company.

CSR System

The JFE Group, aiming to contribute to the betterment of society as a responsible member, has made the implementation and ongoing strengthening of corporate social responsibility (CSR) central to its business. The JFE Group CSR Council, which was established by JFE Holdings in 2005 and convenes quarterly, chaired by the company president, supervises Group CSR activities and related issues such as compliance, the environment, human resources, safety, disaster prevention, social contributions, and countermeasures against criminal groups. Related Group-wide bodies, including the JFE Group Compliance Committee, JFE Group Environmental Committee and JFE Group Internal Control Committee, report to the Council.
Corporate Governance

Major CSR Activities in FY2012

JFE Steel
JFE Steel, which views CSR as strengthening corporate value by increasing stakeholder satisfaction, places top priority on environmental protection, safety, disaster prevention, compliance and other matters that fundamentally impact the business. Great importance assigned to the PDCA (Plan-Do-Check-Action) cycle and company-wide CSR awareness.

The CSR Council, which is chaired by the president, discusses CSR matters and policies as well as monitors the implementation of CSR measures. During FY2012, CSR Council meetings were held on nine occasions to facilitate discussions among 10 committees.

The Customer Satisfaction Committee, which strives to deepen product knowledge among sales personnel, strengthened training in basic steel technology for administrative employees. Also, the committee invited overseas personnel to participate in training sessions on dealing with customers. At the suggestion of the Social Contributions Committee, the company expanded its hosting of activities targeting local communities, such as plant tours, JFE festivals and sporting events. New initiatives for children included educational programs at elementary schools and the ECO Kids’ Tour program for elementary and middle school students at the Eco-Products Exhibition.

JFE Engineering
JFE Engineering, which has its business rooted in the principles of CSR, has designated compliance, safety, disaster prevention and environmental protection as key areas of the company’s social responsibility. The company promotes compliance awareness among employees through direct training and printed materials, and continuously monitors work processes to confirm compliance with all laws and regulations.

JFE Shoji Trade
JFE Shoji Trade has positioned CSR as one of its key challenges and is steadily strengthening activities in this field to fulfill its responsibilities as a member of society. In FY2012, further upgrades were implemented in structures and systems related to internal controls, compliance, environmental management, safety and health.

Going forward, JFE Shoji Trade aims to further crystallize its contributions to society and markets, live up to the trust and expectations of stakeholders through its business practices and further enhance the corporate value of the JFE Shoji Trade Group.

CSR Audit

To ensure that CSR activities are conducted properly, the JFE Group conducts internal audits of environmental management, Antimonopoly Law compliance, expense management, overseas office management, tax law compliance and safety management.

If an audit reveals a problem, the internal audit departments of JFE Holdings and its related operating companies share information to support the implementation of correct measures in CSR activities throughout the JFE Group.

Environmental Philosophy
The JFE Group puts a top priority on protecting and enhancing the global environment to maintain its business in harmony with the environment, ultimately for the prosperity of society as a whole.

Environmental Policy

1. Reduce the environmental impact of all Group businesses
2. Contribute through technologies and products
3. Conserve resources and energy
4. Communicate with society
5. Facilitate international cooperation

JFE Steel Initiatives to Lower Environmental Loads

Energy and Materials Flow in Steelmaking

JFE Steel's efforts to reduce its consumption of energy and materials in steelmaking processes have resulted in extensive recycling of energy, water and materials. Also, plastics and other waste materials are recycled in greater volumes than final wastes.

JFE Steel Initiatives to Lower Environmental Loads

Steel Industry Initiatives

Results of JISF Voluntary Action Plan

JFE Steel and other members of the Japan Iron and Steel Foundation (JISF) implemented a voluntary action plan to improve the energy efficiency of steelmaking. The plan aimed to cut annual average energy consumption between FY2008 and FY2012 by 10% compared to FY1990 levels, which would be equivalent to a 9% reduction in CO2 emissions. Data for FY2012 will be released in December 2013.

Achievements and Results

The 90 companies participating in the voluntary action plan produced a combined 102,377,000 tons of crude steel in FY2011, down 2.2% from FY1990. They cut CO2 emissions by 8.5% compared to FY1990.

Eco-Processes

Japanese steelmakers’ production processes achieve the world’s highest levels of energy efficiency. Aiming to improve these efficiencies even further through Eco-Processes, JFE is working to cut its CO2 emissions by 5 million tons in 2020 compared with a business as usual (BAU) benchmark.

Eco-Solutions

Japan is contributing to CO2 reduction around the world, particularly in developing countries, through the transfer and application of Eco-Solutions that incorporate world-leading energy-saving technologies developed by the Japanese steel industry. These Eco-Solutions are forecast to contribute to the reduction of about 70 million tons of CO2 by 2020.

Eco-Products

The Japanese steel industry also is helping to reduce CO2 emissions by providing high-performance sheet materials for use in lower-carbon products. By FY2020, the use of these sheets in final products in Japan and overseas is forecast to cut CO2 emissions by approximately 33.45 million tons. (FY2010 calculations by Institute of Energy Economics, Japan)

Note: PJ = petajoule (one quadrillion, or 10^15 joules). 1J = 0.23889 cal. 1PJ = approximately 25,800 kL of crude oil.

JISF Action Plan for 2020

Following the completion of the Voluntary Action Plan (2008–2012), JISF formulated the Low-Carbon Society Implementation Plan (2013–2020) based on the same four activities: Eco-Processes, Eco-Solutions and Eco-Products (“Three Ecos” program) and the COURSE 50 program for developing innovative steelmaking processes. The JFE Group is now implementing initiatives aimed at achieving the new plan’s targets.

Innovative Steelmaking Process Development—2050

JFE Steel is hoping to achieve a further 30% reduction in CO2 emissions with steelmaking technologies that will use hydrogen to conserve iron ore and will separate and collect CO2 from blast furnace gases. The first manufacturing facility to deploy these technologies is expected to come online by 2030 (assuming the availability of suitable CO2 storage infrastructure), followed by other plants by 2050 when furnace equipment is to be renewed.

JFE Steel Initiatives to Lower Environmental Loads

Energy Savings and CO2 Reduction in Steelmaking

JFE Steel strives to save energy and reduce CO2 in its steelmaking processes, aiming to achieve the voluntary action plan targets set forth by the Japan Iron and Steel Federation.

Initiatives to Save Energy and Reduce CO2

JFE Steel had been proactively promoting CO2 reduction and energy-savings, including the introduction of energy-saving equipment, before the Japan Iron and Steel Federation introduced its voluntary action plan.

Unit Energy Consumption at JFE Steel (FY2012=100)

- Energy-saving Equipment
  - Pellet furnace fuel reducer
  - Large scale waste heat recovery equipment
  - Power generation (DF top pressure equipment)
  - Soldering waste heat recovery, etc.
  - Process boiling
  - Continuous cast equipment
  - Continuous annealing, etc.

Further Energy Savings

- Waste plastic blast furnace blowing
- Reheating burners
- Urban gas blast furnace blowing
- High-efficiency enzymes plant

Energy-Saving Measures for Global Warming

- Development of Super SINTER® in all districts (2012)
- APR of all Keihin blast furnace waste plastic (2012)
- Construction of shaft furnaces (began operations in August 2008)
- Expanded introduction of high-efficiency enzymes plant
- Basic oxygen furnace gas sensible heat recovery
- High-efficiency enzymes plant
- Urban gas blast furnace blowing
- Endless rolling
- Regenerative burners
- Waste plastic blast furnace blowing
- High-efficiency enzymes plant
- Continuous cast equipment
- Continuous annealing, etc.

Energy-Saving Equipment

Energy-savings and CO2 Emissions in FY2012

Energy consumption and CO2 emissions in steelmaking are greatly influenced by production volume. To accurately assess the effects of improvements due to operational technologies and capital investments, JFE Steel is working to reduce its basic units (energy consumption and CO2 emissions per unit of production) and related energy-conservation activities.

JFE Steel’s FY2012 crude steel production was 27.97 million tons, up 4% from FY2011 and 19% since FY1990. Ongoing energy-saving activities, however, achieved a 4% decrease in energy consumption and a 6% decline in CO2 emissions compared to FY1990.

The company’s annual average energy consumption per unit between 2008 and 2012 was 19% below the FY1990 level and annual average CO2 emissions per unit was down 21%, proving the success of JFE Steel’s energy-conservation activities.

Energy-Saving Measures for Global Warming

Comprehensive Measures to Reduce CO2

JFE Steel initiatives to reduce CO2 emissions also include lowering the environmental impact of distribution, providing high-performance steel materials that save energy in final products and worldwide cooperation in energy conservation and environmental technologies.

Energy Saving in Transportation

To reduce the environmental load of transporting steel, JFE Steel is actively promoting shifting its transport modes to ships and rail. The modal shift rate for FY2012 was 95%.

Non-energy CO2 Emissions

Lime and dolomite, which are used as auxiliary materials in blast furnaces and converters, emit CO2 when broken down. Non-energy-derived CO2 emissions in FY2012 totaled 1.83 million tons.
JFE Steel Initiatives to Lower Environmental Loads

**Environmentally Friendly Initiatives**

### Air Quality

**Reducing Sulfur Oxide and Nitrogen Oxide Emissions**

JFE Steel is increasingly controlling emissions by installing low-NOx burners in reheating furnaces, switching to low-sulfur fuels and deploying desulfurization and denitrification devices in sintering plants, all major sources of SOx or NOx emissions.

### Cyclic Use of Water

**Recycling of industrial water**

*About 3.5 billion tons per year 93.8%*

JFE Steel actively recycles large amounts of water used in its steelmaking processes.

- **Industrial water recycling by the company in FY2012 (high rate of 93.8%)**
- **Changes in Chemical Oxygen Demand (COD)**
- **Management of Chemical Substances**

### Suppressing Dust Dispersion

JFE Steel suppresses dust dispersion through measures including the installation of sprinklers and windbreak fences in raw material yards and enhancement of on-premise cleaning, dust collectors and other dust-collection methods.

### Preventing Water Pollution

JFE Steel strives to reduce its environmental impact on waterways by thoroughly purifying water used in steelmaking processes for release into public waters. Chemical oxygen demand (COD), the water-quality index for waste water, was 3.2 tons per day, the same level as in the previous year.

### Reducing and Reusing Byproducts

**Recycling of slag, dust and sludge 99.8%**

JFE Steel controls the occurrence and emission of iron-based byproducts, such as blast furnace slag and converter dust, and sludge from water treatment facilities and other byproducts. Dust and sludge with high iron content are recycled as raw materials for steelmaking, helping to reduce the final amount that must be disposed.

- **The FY2012 rate for recycling slag, dust and sludge was 99.8%**
- **Generation of Byproducts and Recycling Rates**
- **Chemical Substance Release or Transfer**

### Environmental Monitoring

JFE Steel prevents environmental abnormalities by monitoring a variety of conditions using a range of methods, such as continuous analyses with automated equipment, periodic batch analyses, remote monitoring by industrial-use television, and other means of monitoring atmospheric and water quality. The resulting information is made widely available.

**Spraying water on a raw materials yard**
Reducing Environmental Loads at JFE Engineering

JFE Engineering also provides a wide range of products and technologies that effectively help to reduce CO2 emissions. For example, the construction of large photovoltaic power generator facilities in seven districts across Japan by FY2014 is expected to reduce CO2 emissions by 18,500 tons per year.

In addition, geothermal binary power generators and other renewable energy initiatives will make further contributions to CO2 reduction.

Air Quality
The Tsurumi and Tsu works, which have soot- and smoke-emitting facilities that are regulated by the Air Pollution Control Law, comply with this law and local regulations by setting voluntary emission standards and regularly measuring and managing nitrogen oxide emissions, etc.

The company does not own any facility that discharges general particulates subject to the Air Pollution Control Law, such as benzene, trichloroethylene or tetrachloroethylene.

Chemical Substances
In compliance with the Pollutant Release and Transfer Register (PRTR) Law, JFE Engineering controls its release and transfer of designated chemical substances and reports the figures to the national government through local bodies.

The company not only complies with all laws and regulations, it continues to take steps toward further reduction of PRTR-restricted chemical discharges.

Discharge and Transfer of Substances Reported under PRTR

Proper Management of PCB Waste
For the management and storage of polychlorinated biphenyl (PCB) waste at each plant, status reports are submitted annually to local authorities in accordance with the PCB Special Measures Law.

Treatment of PCB waste is carried out in accordance with the schedule laid down by Japan Environment Safety Corporation (JESCO).
Reducing Environmental Loads at JFE Shoji Trade

Our Business and the Environment

CO2 Reduction Initiatives

Environmental Conservation Initiatives

Legal Compliance
JFE Shoji Trade ensures thorough legal compliance at JFE Shoji Trade and all Group companies by conducting annual checks related to environmental regulations.

Recycling
At each office, JFE Shoji Trade makes an effort to reduce waste and recycle by strictly separating and recycling waste paper.

PCB Waste Management
The JFE Shoji Trade Group properly stores and manages polychlorinated biphenyl (PCB) waste in accordance with the Law Concerning Special Measures Against PCB Waste. A report on the status of PCB management is submitted annually by each office to their respective local governments.

Other Initiatives

J-SLIM Activities
Since 2008, JFE Shoji Trade has been implementing its JFE Shoji Trade Group Strategic Lean Innovation Movement (J-SLIM), a companywide program of operational reforms aimed at enhancing efficiency.

Ongoing reviews and improvements have reduced business hours, business trips and paper usage while also saving space. These activities are also reducing environmental loads.

Power Consumption

#### Electric power consumption

**Compared to FY2001**

- **35% reduction**

#### In-Office Environmental Activities

In domestic offices, all of which have acquired ISO 14001 certification as of 2000, JFE Shoji Trade promotes the reduction of energy consumption and paper usage, and strict management of waste separation.

Energy consumption has been lowered significantly through the implementation of no-overtime days, the installation of pinpoint lighting, turning off lights during lunchtime and a comprehensive transfer project. In FY2012, 1.312 million kWh of energy was consumed, a 35% reduction compared to FY2001.

To reduce paper usage, in addition to using the blank backside of printed materials and two-sided printing, JFE Shoji Trade is moving toward paperless workplaces by digitizing records and using tablets in place of printed handouts at meetings.

In addition, the company has reduced the need for domestic and overseas business trips with the introduction of video conferencing systems in nearly 50 offices worldwide. Also, CO2 reductions have been achieved with more strategic employee transfers.

#### Environmental Sustainability Report

#### TOPICS

- **Comprehensive Transfer Project**
  In November 2012, the JFE Shoji Trade Tokyo head office and its Group companies were consolidated in the Otemachi district of Tokyo to achieve greater unification, visualization and sharing.

  This project involved the transfer of the JFE Shoji Trade Tokyo head office to a newly constructed energy-saving building and the consolidation of workspaces spread over 13 floors in the former Tokyo head office building to just three floors. This consolidation resulted in better communication between departments and improved operational efficiency. Significantly reduced office space, as well as the building's energy-conserving design, reduced the amount of energy consumed.

  In addition, newly installed equipment and machinery have also had a positive eco-effect.

- **Permanent displays in meeting rooms facilitate CO2 Reduction Initiatives**

- **Comprehensive Transfer Project**

  - **In December 2012, the company consolidated 16 Group companies scattered around the Tokyo area into the former Tokyo head office building, a five-minute walk from the new JFE Shoji Trade office.**

  - **This has led to enhanced operations, increased energy conservation through reduced travel time and more effective use of working hours.**

  Office space has been reduced by sharing meeting rooms among Group companies and Group companies have significantly reduced their own document storage needs.

- **In-Office Environmental Activities**

  - **Since 2008, JFE Shoji Trade has been implementing its JFE Shoji Trade Group Strategic Lean Innovation Movement (J-SLIM), a companywide program of operational reforms aimed at enhancing efficiency.**

  - **Ongoing reviews and improvements have reduced business hours, business trips and paper usage while also saving space. These activities are also reducing environmental loads.**

UNI HITEN®: CO₂ Reduction through Lighter Vehicles

UNI HITEN® steel plates are made of 440MPa-class high-strength GA (galvannealed) steel developed for automobile exterior panels. By raising the temperature of the processes for press forming and paint baking, the strength of UNI HITEN® is increased by more than 50MPa above the strength of conventional 340MPa-class BH (bake-hardening) steel plates. Not only does this considerably improve dent resistance, it leads to lighter vehicles made with thinner exterior plates and less components for reinforcement. The commercial use of UNI HITEN® in automobile exterior panels is contributing significantly to CO₂ reduction.

Longitudinally Profiled Steel Plates: CO₂ Reduction through Lighter Ships and Reduced-mass Bridges

Longitudinally profiled (LP) steel plates have varied thicknesses in their lengthwise direction. Forces acting on ship bulkheads decrease toward the top of the bulkheads, so fixed-thickness steel plates add unnecessary thickness in the upper portions of bulkheads. LP plates with varied thickness matched to different levels of force help to reduce ship weight as well as the wasteful use of steel. JFE Steel has established the technology to efficiently manufacture LP steel plates in a variety of forms, contributing to CO₂ reduction through lighter ships and reduced use of materials in bridge construction.

Stainless OCTG for Greener Natural Gas Development

JFE Steel’s upgraded lineup of HP-1, HP-2, UHP™15CR and UHP™17CR steel tubes is contributing to more sustainable eco-societies and more eco-friendly natural gas development. The original product, 13CR martensitic stainless steel for OCTG, is highly resistant to CO₂ corrosion in natural gas fields and functions very well in extreme environments. The new products also are resistant to hydrogen sulfide or high temperatures. UHP™15CR and UHP™17CR high-strength steel tubes withstand the especially severe environments of deep oil and gas wells. They are also suited to environments containing CO₂ and small amounts of hydrogen sulfide in high temperatures ranging from 200°C (UHP™15CR) to 230°C (UHP™17CR).

In addition, compared to conventional materials, JFE Steel’s advanced products conserve resources by cutting back on alloys and eliminating cold extraction. They also help to shorten delivery times.

1 Corrosion inside OCTG after one year

Used Plastic Pulverization Technologies for Blast Furnaces

JFE Steel’s pulverization plant was the world’s first facility to commercialize used-plastic pulverization technology—a proprietary advanced plastic recycling process—for used containers and package plastic when it launched in the East Japan Works’ Keihin District in March 2007. Compared to conventional technologies, this process more efficiently reduces iron ore in furnaces that use waste plastic, thereby conserving resources and reducing CO₂ emissions. The technology won the Nikkei Global Environmental Technology Award for Excellence in 2012.
COURSE50 Project to Cut CO₂ Emissions in Blast Furnaces

JFE Steel is a leading member of a project known as CO₂ Ultimate Reduction in Steelmaking Process by Innovative Technology for Cool Earth 50 (COURSE50), which is developing innovative technologies to reduce CO₂ emissions from blast furnaces. The company is working on CO₂ separation with a pressure swing adsorption process and recovery technology to capture unused waste heat contained in steel slag. One method uses a special adsorbent for efficient, low-cost separation and collection of large amounts of CO₂ contained in furnace byproduct gases. A demonstration experiment is being carried out at a pilot plant in the company’s Fukuyama District. Methods to collect waste heat emitted from steelmaking slag as hot as 1,600°C are being developed in a separate experimental project at a pilot plant in the company’s Chiba Works.

Iron-steel Slag Products for Marine Restoration

JFE Steel makes effective use of all company-produced iron-steel slag, which up to now has been used predominantly for construction and the production of cement. In recent years, the company has been advancing the use of iron-steel slag as a material for environmental protection initiatives, including the restoration of marine environments.

Marine Stone® for Seaweed Bed Cultivation

JFE Steel began constructing an underwater reef for seaweed beds along the Iwakuni coast of Yamaguchi Prefecture in January 2013. Some 13,000 m³ of Marine Stone® from the West Japan Works (Fukuyama) is being used to build a reef covering 6,432 m². The reef will be used by the Kojiro Fisheries Cooperative and the Ube National College of Technology to reestablish seaweed resources lost to the tsunami in March 2011, which has adversely impacted the local fishery. Marine Stone® was selected as an alternative material to natural rock that once formed the seaweed bed’s foundation. Going forward, a local research committee comprised of academic experts will monitor regrowth and evaluate the efficacy of this innovative method.

Sulfide Suppression Using Iron-Steel Slag

Aiming to solve the problem of hydrogen sulfide odors emanating from bottom sludge in inner ports and harbors of Fukuyama Prefecture, JFE Steel is collaborating with Hiroshima University to conduct field verification tests using Marine Stone®. There is hope that this JFE Steel material will support inhabitation by a rich variety of organisms that would help to naturally purify the marine environments.

At a seminar held in February 2013, reports were presented on iron-steel slag’s usefulness in suppressing sulfide, as well as attracting inhabitation of benthic organisms, crustaceans and young fish. This seminar is part of a comprehensive research partnership focusing on the use of iron-steel slag to improve marine environments, which Hiroshima University and JFE Steel inaugurated in September 2011.

Slag Products to Build UMI Farm at Yokohama Hakkeijima Sea Paradise

JFE Steel’s iron-steel slag products—Marine Blocks®, Marine Rocks® and Marine Stone®—were used in the construction of UMI Farm: Natural Ocean Aquarium, a new attraction that opened at Yokohama Hakkeijima Sea Paradise in March 2013. JFE Steel also entered into a research partnership with Yokohama Hakkeijima Inc., the marine park’s management company, to explore the use of iron-steel slag products for restoring ocean environments. UMI Farm’s Ocean Laboratory is using Marine Blocks® in its research into ecological enhancement, including attracting ocean organisms that function as natural purifiers. The aim is to restore ecosystems that traditionally existed in Tokyo Bay by increasing biodiversity. JFE Steel’s iron-steel slag products can be observed from the Ocean Laboratory’s glass-bottom boat.
To maintain a ship’s balance after cargo has been offloaded at a port, seawater is injected into its ballast water tank to maintain stability. As ballast water contains alien species, it may pose ecological problems when it is released at the next port. To solve this problem, JFE Engineering developed the JFE Ballast Ace system to remove marine organisms and purify seawater in ballast tanks. At present, a steadily increasing number of countries have ratified the International Ballast Water Control Convention, which calls for the installation of ballast-water treatment devices in ships. Implementation of this convention is expected soon. JFE Ballast Ace not only is simple, sure and safe, it is the world’s most cost-effective system of its kind. Acclaimed around the world, this system has attracted orders for a cumulative 293 ships as of June 2013.

While increased use of bicycles in urban areas is promoting green transportation, the illegal parking of bicycles near train stations has become a problem. To help resolve this problem, JFE Engineering developed CYCLE TREE, a fully automatic multilevel system that quickly parks bicycles in confined areas, such as around urban train stations. Since launching CYCLE TREE in 2001, JFE Engineering has steadily innovated a variety of products for special conditions, such as locations requiring horizontal or in-building structures. As of January 2013, the company has installed 14 systems across Japan, representing a total storage capacity of well over 17,000 bicycles, making CYCLE TREE the top automated parking structure in Japan.

In 2013, JFE Engineering received an order for a geothermal binary power generation facility under a project conducted by Shin Nippon Biomedical Laboratories in Ibusuki, Kagoshima Prefecture. Binary power generation, which effectively uses low-temperature steam and hot liquids, is both highly efficient and eco-friendly as it uses and fully returns liquid from inside the Earth. The new facility, Japan’s first megawatt-class geothermal power plant in 14 years, is also the country’s only binary power-generation facility to utilize a newly dug well rather than one from an existing power plant or hot springs. Since designing and constructing the transportation system for Japan’s first geothermal power plant in 1966, JFE Engineering has been involved in fully half of the 18 geothermal power plants currently operating in Japan, as well as overseas geothermal power plants in Indonesia and Kenya. From high-performance cyclone separators incorporating original technologies to binary power plants, JFE Engineering is an integrated developer and promoter of solutions using geothermal power-generation as a stable, purely domestic and renewable source of power.

Expectations are rising for biomass power generation using palm kernel shells (PKSs), the crushed shells of palm nuts, which contain approximately 70% of the calorific value (4,000–4,500 kcal) of fuel coal. In 2010, JFE Shoji Trade established a PKS depot in Malaysia, the first of its kind by a Japanese company, as part of a feasibility study. Further impetus was realized in 2012 when Japan enacted a renewable energy law that is expected to apply to PKS as biomass fuel for power generation. JFE Shoji Trade is now receiving inquiries regarding its provision of PKS to operators of biomass power generators. Also, empty fruit bunches (EFBs) left over after removing the kernels when producing palm oil are five times greater in volume than PKS. EFB now is being carbonized and provided to blast furnace manufacturers as a carbon material, and potassium removed in the manufacturing process is being developed as a recycled soil-conditioning fertilizer.

In 2013, JFE Engineering received an order for a geothermal binary power generation facility under a project conducted by Shin Nippon Biomedical Laboratories in Ibusuki, Kagoshima Prefecture. Binary power generation, which effectively uses low-temperature steam and hot liquids, is both highly efficient and eco-friendly as it uses and fully returns liquid from inside the Earth. The new facility, Japan’s first megawatt-class geothermal power plant in 14 years, is also the country’s only binary power-generation facility to utilize a newly dug well rather than one from an existing power plant or hot springs.

Since designing and constructing the transportation system for Japan’s first geothermal power plant in 1966, JFE Engineering has been involved in fully half of the 18 geothermal power plants currently operating in Japan, as well as overseas geothermal power plants in Indonesia and Kenya. Resource-recycling Solutions

The JFE Group engages in recycling businesses as an offshoot of its steelworks recycling technologies, such as the use of plastics in blast furnaces. In the engineering field, its recycling businesses are related closely to local communities, such as the sorting and storage of waste plastics and the conversion of refuse into solid fuel.

JFE also contributes to sustainable societies by offering disposal solutions for various types of waste, including materials, chemicals and thermal recycling, aiming to minimize the amount of final disposal.

JFE Group Recycling Businesses

- **Toyama**
  - Waste material recovery plant for spent catalysts
- **Kurashiki (Mizushima)**
  - Waste gasifying and melting furnace
  - Waste wood carbonization plant
  - Electric furnace recycling plant
- **Fukuyama**
  - Waste plastic recycling plant
  - PTFE manufacturing plant
  - Kiln incinerator
  - Washable-controlled boiler
  - Refuse-derived fuel (RDF) gasifying power generation plant (extension operation) + Fukuyama plastic material recycling plant

Containers and packaging (or other) plastics competitively bid in FY2013

100,000 tons

**Recycled Plastic Boards**

JFE Steel recycles containers, packaging and other plastics collected from household garbage for reuse in new products. At present, recycled plastic is used for outdoor poster boards (used to display candidate information during elections) and coil guard plates inside steelworks.

Recycled Product Example

Environmental Management System

**JFE Group Recycling Businesses**

- **Sendai**
  - Plastic packaging waste sorting and baling plant
  - Plastic material recycling plant
  - Electric furnace recycling plant

- **Kawasaki**
  - Waste plastic recycling plant (Ogishima & Mizue)
  - Can and PET bottle sorting and baling plant
  - Solid waste recycling plant

Used consumer appliances processed in FY2012

20 million tubes

560,000 units

Environmental Management System

**JFE Framework for Environmental Management**

The JFE Group Environmental Committee chaired by the president of JFE Holdings, operating under the JFE Group CSR Council, manages environmental issues by setting objectives for environmental protection, monitoring progress and working to improve environmental performance.

JFE Steel has an Environment Management Department at its head office and in each business office, as well as an Environment Management Committee in each local office.

JFE Engineering carries out environmental protection activities with clearly defined objectives under the leadership of the president. The Environmental Committee, with the help of its subordinate Environmental Expert Committee and Environmental Liaison Committees, is responsible for overall management and guiding subordinate companies, and both planning and implementing environmental policies.

At JFE Shoji Trade, environmental management supervisors oversee improvements in environmental management systems based on ISO 14001 standards. The supervisors also help devise Group-wide policies for achieving environmental targets under regulatory compliance.

Environmental Education

The JFE Group actively provides education to enhance its corporate culture of environmental protection in which all employees participate. Education at operating companies includes training for new recruits and newly promoted employees, and for environmental preservation activities by position and job.

In addition to education concerning compliance with environmental laws and regulations, JFE Steel encourages employees to obtain qualifications as pollution control managers. In FY2012, 74 persons were qualified, bringing the total since 2005 to 1,074 people.

In FY2011, a new training program was launched for pollution control managers. In FY2012, 74 persons were qualified, bringing the total since 2005 to 1,074 people.

Environmental Auditing

In addition to auditing by ISO 14001 certification organizations, certified operating companies are also audited internally by specialized auditors trained by external organizations. The Audit and Environment Management departments of JFE Steel’s head office conduct environmental audits of offices and subordinate companies. From FY2011, self-evaluations have been carried out using a check sheet, based on which detailed audits have been performed annually.

**Environmental Management System**

Acquisition of ISO 14001 certification is an important part of each JFE Group company’s voluntary environmental program. All JFE Steel and JFE Engineering production sites and JFE Shoji Trade office business offices have received certification. Together with their affiliates, they maintain their certification status through regular inspections and reviews.
Supply Chain Management

Under with the concept of life cycle assessment, the JFE Group strives to reduce environmental loads throughout its supply chains. Also, operating companies work with business partners to reduce their use of materials that have environmental loads. Group procurement policies help to conserve resources and protect the environment by adhering to all laws and regulations, and to the procurement principles prescribed under the Charter of Corporate Behavior developed by the Japan Business Federation. Going forward, the JFE Group intends to further accelerate efforts related to its supply chains.

Environmental Accounting

Environmental Accounting Approach

The JFE Group has successfully saved energy and reduced environmental loads by making its production facilities more efficient and introducing more environmentally friendly equipment. These investments, which are booked as environmental costs, cover energy-saving and environmentally friendly equipment and facilities, and expenses required for environmental protection and load reduction.

Capital Investment

To save energy and reduce environmental loads stemming from production, the JFE Group actively invests in plant and equipment incorporating environmental technologies. Cumulative investment in energy saving, totaling ¥435.2 billion since 1996, has enabled the Group to achieve energy efficiencies that are among the highest in the world. In total, the Group has invested ¥588.7 billion in environmental protection measures since 1973.

Environmental Capital Investment and Activity Expenses

<table>
<thead>
<tr>
<th>Environmental capital investment</th>
<th>Environmental activity expenses</th>
</tr>
</thead>
<tbody>
<tr>
<td>¥21.6 billion</td>
<td>¥118.3 billion</td>
</tr>
</tbody>
</table>

Environmental-related capital investment totaled ¥21.6 billion and expenses amounted to ¥118.3 billion in FY2012. In terms of capital expenditure, the majority was invested in energy-saving and other global warming countermeasures that amounted to ¥7.6 billion, followed by ¥6.4 billion for air pollution countermeasures and ¥5.8 billion for environmental research and development.

Environmental activity expenses included ¥7.5 billion targeting global warming, ¥29.6 billion for air pollution countermeasures, and ¥17.3 billion for recycled industrial water. Environment-related R&D expenses came to ¥13.8 billion.

Environment-related capital investment as a percentage of overall capital investment was roughly 28%.

Results of Environmental Activities

<table>
<thead>
<tr>
<th>Energy conservation effect</th>
<th>¥1.6 billion</th>
</tr>
</thead>
</table>

Environmental protection costs include Group efforts to lower unit-based CO2 emissions to prevent global warming and measures to reduce final disposal waste through active recycling to conserve natural resources. Other aims include reducing discharges of airborne and waterborne substances that have pollution loads, and also complying with all statutory regulations concerning exhaust gas emissions and discharged water.

The monetary value of energy savings realized through environmental capital investments and expenses in FY2012 was estimated at about ¥1.6 billion.

Environmental Management

The JFE Group gives utmost priority to communication with all stakeholders, including in matters relating to the environment.

Forum: JFE Tombo Michi
—How Far Does a Dragonfly Fly?

The How Far Does a Dragonfly Fly? Forum, launched in 2003, is part of an initiative to promote ecology and expand greenery in the Keihin coastal area. This forum brings together corporations, citizens and local governments to conduct research on the movement and habitats (species and numbers) of dragonflies in the public biotope and green spaces surrounding regional factories. Participating in the forum from its inception, JFE Engineering provides research facilities and staff.

Through research conducted by the forum over a 10-year period, it was discovered that improvements in natural environments could be estimated from changes in dominant species. It was also observed that parks in urban areas make people feel more at home, and that coastal dragonflies have unique characteristics not exhibited by dragonflies in inland areas. The expanded distribution of certain species is thought to indicate a close link to flora and fauna in surrounding environments (dragonfly network) in Keihin coastal area green spaces. In recognition of these activities in 2012, the forum was presented with the Yokohama Environmental Activity Award Grand Prize and Special Prize for Biodiversity. The forum also won the Ministry of the Environment FY2013 Minister’s Prize.

Going forward, this forum will continue to promote environmental protection activities in the Keihin coastal area and other regions.

Environmental Exhibition

Eco-Products 2012

The JFE Group participates in exhibitions to provide stakeholders with information about its environmental activities.

At Eco-Products 2012, held at Tokyo Big Site in December 2012, JFE environmental activities in the steel and engineering areas were introduced under the theme “JFE Group Activities Aiming to Develop Sustainable Societies with the World’s Highest Technologies.” Steel-related presentations focused on global warming initiatives based on the “Three Ecos” (using/making/spreading), while engineering presentations under the theme “Creating Future Eco-Friendly Cities” introduced eco-friendly cities of the future through ideas such as environmentally friendly biomass and geothermal power generation technologies, rooftop parks and commuter-bicycle parking facilities. In another activity, eco-tours taught children how their futures are linked to ecology.

Eco Products 2012

Ecobeing Environmental Website

The JFE Group cooperates with the “ecobeing” environmental website, which contains a diverse array of content aimed at spreading awareness about eco-activities.

In FY2012, the content included ecologically minded influential individuals, such as then Tokyo Deputy-Governor (now Governor) Naoki Inose, and explored diverse ideas on the future of energy.

Compliance

About Compliance

Every aspect of a business is scrutinized with regard to corporate social responsibility (CSR) because society demands high levels of fairness and transparency. The JFE Group makes compliance — the foundation of CSR — a key priority and takes steps to ensure that all employees embrace the importance of compliance and work to promote it.

Raising Compliance Awareness

The JFE Group’s Corporate Ethics Hotline helps to ensure that important information regarding compliance is communicated from the front lines to top management rapidly and accurately. The hotline is operated under rules and regulations that protect people who report information or seek advice. After the facts of a case are reviewed, the outcome is communicated to the caller.

Cases handled by corporate ethics hotline in FY2012

34

The JFE Group’s Corporate Ethics Hotline received 34 calls regarding matters at JFE Holdings or its operating companies.

Social Performance Report

Compliance Guidebook

Compliance guidebook
Approx. 68,000 copies distributed

All employees and executives are provided a copy of the JFE Group Compliance Guidebook, which was first issued in 2006 and then updated in 2007 and 2009. The guidebook presents over 100 case studies written in plain language to help employees understand JFE’s standards for complying with laws and regulations, as well as internal rules based on social norms. Situations occurring in daily operations that can be unclear or confusing are provided, with each case accompanied by an explanation prepared by the relevant department and reviewed by an attorney for legal compliance. The publication also is used at workplaces as a textbook for company training.

Compliance Guidebook
Compliance

Awareness Survey
The JFE Group conducts its Corporate Ethics Awareness Survey to quantitatively assess employees’ awareness of ethics, identify possible risks and help employees stay informed about JFE’s corporate vision. Recent surveys indicate that many employees believe compliance awareness and behavior have strengthened at JFE. In particular, awareness of corporate policies and values is thought to have improved greatly, and compliance systems and activities are said to have steadily taken hold among employees.

The results of these awareness surveys are reflected in practical measures aimed at creating a better company.

Compliance Training
To ensure thorough compliance, the JFE Group conducts compliance training on topics such as antimonopoly law, insider trading, security export controls, the Construction Business Act, and the Foreign Corrupt Practices Act. Compliance education includes training for everyone from managers to new hires. In addition, JFE Shoji Trade conducts training for trading companies based on its compliance handbook.

Compliance Pledge
When JFE Group employees set their annual job goals, they also take a pledge to comply with all laws and regulations, both internal and external. JFE believes that the pledge helps to foster compliance awareness.

Compliance Rules Awareness Activities
Compliance Month at JFE Steel is observed every October, when individual worksite conduct compliance-awareness activities to encourage employees to strengthen their awareness, mindfulness and understanding of the rules.

Each department holds sessions in which participants read legal texts, internal regulations and other materials and information placed in the Compliance Guidebook or posted on the company intranet by the Legal Affairs Department. Such efforts foster greater awareness of compliance and encourage employees to consider if their work practices are in compliance. After Compliance Month, work practices and company rules are revised as required.

Antimonopoly Law Compliance Initiatives
JFE Steel and JFE Engineering, both regretting past violations of the Antimonopoly Law, continue to implement thorough measures aimed at eliminating the possibility of future infringements.

The internal audit departments of both companies constantly monitor contact with other companies to avoid Antimonopoly Law violations. They also check to see that initiatives aimed at promoting legal compliance are functioning properly. Audits are regularly conducted at all business locations, including branch offices. Other group companies also implement related compliance initiatives.

Key Initiatives of Both Companies
- Commitments by top management
- Antimonopoly Law training based on specific cases of how violations can seriously impact companies and individuals
- Upgraded regulations to better clarify how violations could lead to disciplinary action
- Strengthened rules on contact with other companies in the same industry

In addition, JFE Steel monitors the activities of external organizations to which its sales department belongs, and JFE Engineering works to ensure that its order-acceptance process is transparent and conforms with antimonopoly requirements.

Initiatives
The JFE Group takes precautions to avoid any relationship with organized crime. The General Administration and Legal Affairs divisions of each group company are responsible for reporting any related incident, establishing relevant rules and working with police and other authorities to address any matter resolutely.

Rejection of Organized Crime
Clarification of JFE Group Standards of Business Conduct
The JFE Group Standards of Business Conduct clearly state that the group refuses to associate with any element or organization that threatens social order and stability, and rejects all illegal or improper demands.

Regulations Concerning Violence Directed at Companies
The Group has its own Regulations for Addressing Violence Directed at Companies and related standards for addressing organized crime, including a manual on the initial steps that should be taken in responding to violence targeting companies.

Training
Thorough understanding of the JFE Group Policies for Addressing Antisocial Forces and specific response standards among all executives and employees is ensured through training and other steps such as distribution of the Compliance Guidebook.

Database and Terms for Fighting Organized Crime
A database of antisocial activities is being created and conducted based on specific cases of how violations can seriously impact companies and individuals.

Countermeasures Against Organized Crime
The JFE Group Policies for Addressing Antisocial Forces works to ensure sound company management through uniform organization-wide measures in response to antisocial (organized crime) activities.

Prevention of Improper Use of Information
1. Authentication measures of JFE’s integrated security system
2. Personal computer startup authentication using passwords and additional factors (IC cards, etc.)

Measures against External Threats
1. Measures to prevent malware
2. Firewall restrictions on outside access
3. Detecting and protecting against suspicious communications

Privacy Protection
The JFE Group has formulated the following policies on the handling of personal information to facilitate smooth and appropriate operations.

Basic Policies for Protection of Personal Information
1. The JFE Group, mindful of the growing use of personal information, endeavors to protect the rights and interests of individuals while also considering the value of information from a business perspective.
2. The JFE Group observes the Law Concerning the Protection of Personal Information and all other relevant laws and ordinances, and endeavors to adhere to the spirit and letter of such laws in the protection of personal information.
3. The JFE Group protects personal information based on internal rules concerning information management, and by informing, educating and training employees on these rules and other applicable laws and ordinances. The JFE Group reviews and enhances its privacy-protection measures and internal rules on an ongoing basis.

Measures against Information Leaks
1. Limits on use of removable media and maintenance of logs
2. Checking e-mail sent to external parties
3. Retention of all e-mail sent to external parties
4. Limits on use of Web-based e-mail
5. Limits on use of Web-based bulletin boards, etc.
6. Preventing access to the Group network via non-authorized computers

Information Security Management
The JFE Group’s information management system supports the smooth and appropriate conduct of business.

Prevention of Improper Use of Information
1. Authentication measures of JFE’s integrated security system
2. Personal computer startup authentication using passwords and additional factors (IC cards, etc.)

Measures against Information Leaks
1. Limits on use of removable media and maintenance of logs
2. Checking e-mail sent to external parties
3. Retention of all e-mail sent to external parties
4. Limits on use of Web-based e-mail
5. Limits on use of Web-based bulletin boards, etc.
6. Preventing access to the Group network via non-authorized computers
Quality Assurance System

JFE Steel
JFE Steel has acquired ISO 9001 and various other quality assurance (QA) certifications, including the JIS mark and approvals from ship classification bodies. In response to globalization needs and customer demands, the company has been certified for standards specific to countries where the company has business. Also, to meet demands for more advanced and functional quality, JFE Steel is deploying cutting-edge sensors and materials testing facilities as part of investing in quality assurance. The company will continue strengthening its quality assurance structure to provide products that all customers can use with confidence, and thereby enhance trust in the JFE brand.

JFE Shoji Trade
JFE Shoji Trade prioritizes product quality in its corporate activities and its Group-wide proactive quality assurance system enables customers to transact business with peace of mind. In FY2012, manager meetings were held at Group steel plate processing centers in Japan and overseas to support the creation of a Group-wide product quality assurance system and to facilitate the exchange of related technologies.

Fair Competition and Trade

Compliance in purchasing and procurement activities is critical in becoming a good business partner and developing mutual understanding and trust with suppliers. Each JFE operating company clearly defines its purchase/procurement policy and discloses it to suppliers to help them maintain the same high standards. 

JFE Steel
www.jfe-steel.co.jp/company/purchase_policy/index.html (Japanese only)

Appropriate Export Procedures

JFE Steel is taking steps to promote international peace and security by working against the spread of weapons of mass destruction and excess accumulation of conventional weapons. The company carries out inspections to confirm the final destinations, customers and applications of its exported products, and follows all export procedures. In addition, the Company’s Legal Affairs Department conducts internal briefings to spread knowledge of export-related laws and regulations, such as the Foreign Exchange and Foreign Trade Act.

JFE Shoji Trade also ensures compliance in its export activities through security-related education and other measures targeting sections and Group companies involved in trading.

Improving Customer Satisfaction

JFE Steel

Working with Customers to Establish Testing and Research Facilities for Product Development
JFE Steel has its own facilities for conducting joint research and development with customers. These include the Customers’ Solutions Lab for auto-industry customers and the Steel Structural Materials Solutions Center for customers involved with infrastructure. The facilities are equipped with equipment for widely varying research and experimentation, plus conference rooms and space for exhibiting research results. They have achieved a number of successes in resolving customers’ technological issues through testing and discussion. In August 2010, the Steel Structural Materials Solutions Center’s exhibition area for civil-engineering steel materials underwent a major renewal for improved customer satisfaction.

Operational System
JFE Steel’s 2006 migration to the current (J-Smile) system has enabled the company to create a strong management information infrastructure and operational system to better leverage management resources and increase customer satisfaction. J-Smile has enabled JFE Steel to strengthen its response to customer needs in areas such as lead-time, delivery date, quality assurance, and product development. At the same time, existing systems at steelworks have been upgraded for effective consolidated operational control and management.

For its success in realizing operational processes and systems that facilitate innovation, J-Smile received the FY2006 Minister of Economy, Trade and Industry Award for Companies, 2nd Prize at the IT Japan Awards 2007, and the World Information Technology and Services Alliance IT Prize 2008.

Customer Strategies
JFE Steel regularly conducts customer questionnaires and interviews and then uses the information to draft strategies for greater customer satisfaction. The company also develops business strategies that are shared among the sales departments, business planning department, steelworks, and research laboratories, thereby facilitating unified customer care, as well as accelerating operations.

Nurturing Capabilities of Sales Department
The Sales Department holds training sessions by gathering sales managers from headquarters, branch offices, and foreign offices to discuss how best to work with customers and create better relationships with them. The meetings focus on learning from reports on topics such as how to overcome challenges and reach resolutions to enhance customer relationships, and what is being done to further enhance customer relationships. The above two points are considered by the participants, who then take new ideas back to their respective sales offices to strengthen local capabilities. Reflecting the accelerating globalization of JFE’s operations, Q&A and information-exchange sessions are increasingly being conducted in English.

Sales Personnel Who Excel in Customer Relations
The Sales Department of JFE Steel conducts basic courses for newly appointed sales personnel on the fundamentals of steel materials, to foster their capabilities for technical discussions with customers, quick evaluation and handling of complaints, and ensure internal communication of hints that lead to product development. The effort is backed by handbooks on the components and end uses of products in specific sectors and fields.

JFE Engineering

Application of Customer Evaluations
Through customer surveys and interviews and construction evaluation forms aimed at customers of our products and services, we collect and accumulate information on our construction management, product quality, advanced technologies, and innovation. Our divisions analyze this information and use it for purposes such as quality improvements and enhancement of new product development and after-sales service, with the aim of maximizing customer satisfaction.

JFE Shoji Trade

Diverse Customer Data for Better Service
JFE Shoji Trade is expanding its databases of information covering evaluations from the customer’s perspective, business histories and successes/ failures. Departments use the data to strengthen the presentation and negotiation skills of employees for enhanced customer satisfaction.
Shareholders and Investors

Returns to Shareholders

JFE Holdings considers returns to its shareholders to be one of its top management priorities. The company strives to ensure a sustainable financial position to aggressively provide dividends while also proceeding with investments designed to achieve new growth and improved financial health of the Group.

The goal is to maintain a basic payout ratio of around 20% and proactively invest in areas such as securing interests for resource acquisition and expansion of operations in Asia.

Disclosure Policy

www.jfe-holdings.co.jp/investor/disclosure-policy.html (Japanese only)

Communication with Shareholders and Investors

Shareholders

General meeting of shareholders in June 2013 841 participants

Plant tours for shareholders (FY2006 - FY2012) 15,996 participants

JFE Holdings, viewing its general meetings of shareholders as a chance for dialogue with shareholders, sends invitations at the earliest possible date in an effort to maximize attendance and avoid days on which other shareholder meetings are concentrated. For shareholders who cannot attend, the company allows voting online in addition to providing the normal proxy form.

To improve shareholders understanding, the company has been holding plant tours and briefing sessions. In FY2012, workplaces at JFE Steel, JFE Engineering and Japan Marine United (formerly Universal Shipbuilding Corporation) held 32 such events for 2,369 shareholders.

Investors

Individual interviews with institutional investors and securities analysts in FY2012 600 people

Briefings for private investors at securities firms in FY2012 31 sessions

Approx. 2,300 people

The JFE communicates actively with investors, including by receiving and visiting institutional investors and securities analysts. Individual investors are provided with briefings, videos of investor meetings and e-mails concerning IR information. Important information is provided to overseas investors via press releases in English.

An IR Section in the Finance and IR Department performs the important task of keeping all workplaces and Group companies informed about market and institutional investing trends and third-party evaluations of the JFE Group.

Philanthropic Activities of JFE 21st Century Foundation

The JFE 21st Century Foundation, which was founded as the Kawasaki Steel 21st Century Foundation in 1990, took its current name in 2003 and then was converted into a nonprofit foundation of the JFE Group on April 1, 2012. The Foundation continues to fulfill its original mission of being open to society and promoting the common good.

JFE 21st Century Foundation

www.jfe-21st-cf.or.jp/index_eng.html

Support for Technology Research

The foundation has supported technology research at universities since FY1991.

In FY2012, when the foundation fielded 141 grant requests, a total of 40 million yen was provided in the form of two-million-yen grants each provided to 10 projects involving iron and steel technologies and another 10 projects concerning environmental technologies, including global warming prevention.

Support for Education in Steel-related Communities

The foundation began awarding grants to support Asian history studies at Japanese universities in FY2005. During FY2012, 57 applications were received and seven grants, worth 1.5 million yen each and 10.5 million yen in total, were ultimately awarded.

Support for Education in Steel-related Communities

Since FY1991, the foundation has been sponsoring JFE 21st Century Foundation prizes for contests in the writing of essays and poems, including tanka and haiku poetry. The contests are conducted by the Japan Overseas Educational Services for Japanese elementary and middle school students studying overseas. Copies of Chikyu ni Manabu (Learn from the Earth), a collection of the winning entries in FY2012, were presented to 470 elementary schools, 215 middle schools, 87 public libraries and 11 education committees.

Events in FY2012

- Jo Chihun Cup Go Competition (Chiba)
- Chiba Prefectural Youth Go Competition (Funabashi)
- International Music Day Concert
  Chiba Citizens’ Music Festival
  Special Performance of Beethoven’s Ninth Symphony
  by the Citizens of Chiba Prefecture (Chiba)
- NHK Symphony Orchestra Subscription Concert
- MUSA Lunch & Night Concert (Kawasaki)
- Community Festival (Kawasaki)
- Handa Community Industrial Festival (Handa)
- Handa Float Festival (Handa)
- Mie Prefecture High Schools’ Robot Tournament (Tsu)
- Kurashiki Music Festival (Kurashiki)
- Kurashiki Shogi Tournament (Kurashiki)
- Fukuyama Rose Festival (Fukuyama)
- The World of Matsuri (Fukuyama)

### Local Contribution Activities

#### Education at Elementary Schools

The East Japan Works of JFE Steel conducts plant tours and outbound classes for students at nearby elementary schools. Before children are taken on plant tours, company employees visit schools to explain steelmaking processes, steelworks features, environmental initiatives and other topics. From this fiscal year, plants are reaching out to more elementary schools with programs matched to specific interests.

#### Manufacturing Classroom

Since FY2003, JFE Steel has been working with elementary school children in the Chita area of Aichi Prefecture to help them appreciate that making things is interesting and fun. Retired employees teach and assist children to make accessories out of cast parts and then accompany them on plant tours. In FY2012, the company held 11 tours for 778 students. Classrooms on a similar scale are planned in FY2013.

### Activities for Host Communities

The JFE Group annually opens up its manufacturing facilities to local residents for demonstrations, tours, and other events. In addition, recreational facilities are made available for community sports activities, and the Group also sponsors soccer, baseball, volleyball, basketball, and other sporting events. Such activities help to promote and expand sporting activities in the communities.

### Support for External Organizations

#### UN World Food Programme

The Japan Association for the UN World Food Programme is an NGO-accredited supporter of the UN World Food Programme (WFP), a United Nations organization with the mission of eliminating hunger and poverty. The association conducts promotional activities to help expand the circle of WFP support in Japan, including collecting donations to assist WFP activities, conducting public relations activities, and promoting cooperation with companies and organizations. The JFE Group supports these activities.

#### Training for Foreign Doctors

Assisted by private corporations, Toranomon Hospital has been managing the Japanese Council for Medical Training (JCMT) to provide training opportunities for foreign doctors. This program invites doctors from developing countries primarily in Asia to Japan, allowing them to go through advanced medical training and then return to their home countries to promote enhanced medical standards. It also aims to foster friendship between Japan and the countries that dispatch the doctors. The JFE Group provides assistance to this undertaking.

#### Japanese Foundation for Cancer Research

The Japanese Foundation for Cancer Research is helping to overcome cancer by playing a leading role in research and treatment, as well as human resources development in Japan, since its establishment in 1908. The JFE Group supports the foundation’s activities.

#### Support for Youth Development

#### Japanese Language Speech Contest

The China Education Association for International Exchange, The Society of Chinese Professors in Japan and Nikkei Inc. have been sponsoring the All China Japanese Speech Contest since 2006. The JFE Group supports the contest as a way to promote international exchange and contribute to society.

#### Support for External Organizations

### High School Essay Contest

The Japan Science & Engineering Challenge (JSEC) is a national science paper contest for high school and technical college students. JFE Steel began supporting the JSEC in 2006 out of its desire to foster the development of future scientists and engineers.

In 2012, the JSEC JFE Steel Prize was awarded to the Shibuya Kyouiku Gakuen Makuhari Junior and Senior High School.

### Supporting Elementary Schools in Ghana and Nigeria

Since 2011, JFE Shoji Trade and its subsidiary Kawasho Foods Corporation have donated desks, chairs, T-shirts and canned products handled by the company to elementary schools in the West African countries of Ghana and Nigeria.

In FY2012, 800 sets of desks and chairs, 1,000 T-shirts and 25,000 cans of food were donated. Going forward, these support activities are expected to be continued to further West Africa’s economic development.

### FY2012 Internship Achievements

JFE hosted 130 students from around Japan as interns in FY2012.

#### Visitors to JFE Group festivals in FY2012

Approx. 418,000
**Employees**

**Deployment of Human Resources**

**Recruitment**
With Japan on the verge of a massive generational change due to baby-boomer retirements, securing outstanding human resources is a key issue for the JFE Group. Both new university graduates and midcareer personnel, as well as foreigners and women, are being recruited from increasingly broader channels, in view of labor supply and demand conditions going forward.

**Work-Life Balance**
JFE Steel introduced the following work policies to support the nurture of young people.

1. **Extended Child Care Leave**
   Employees can take extended child care leave until their child reaches 18 months of age. In the event there are difficulties finding vacancies at child care centers, an additional extension may be allowed until the child is three years old.

2. **Shortened Working Hours**
   An employee can shorten their working hours by two hours per day until their child finishes the sixth grade of elementary school.

3. **Leaves for Work-Life Balance Support (WLBS)**
   An employee who must provide nursing care or take part in school events may take up to five days of leave per year until their child finishes elementary school. Employees with more than one child may take up to 10 days of leave per year.

4. **Special Leave when Spouses Give Birth**
   Employees are allowed a five-day leave when children are born.

**Child-care and Nursing Leave**
Employees are allowed a five-day leave when children are born.

Note: Figures in parentheses are males.

In September 2012, JFE Engineering opened a company-operated childcare facility near its Yokohama head office in Tsurumi Ward. The preschool, called Children’s Forest, is located inside the JR Tsurumi Station building, which is used by many employees during their daily commutes. Hours of operation correspond to company hours.

**Helping Women to Thrive**
As of April 2013, JFE Holdings and its operating companies had approximately 5,800 career-track employees (about 4,300 in management positions), including 519 women (56 in management positions). New recruits in FY2013 included 62 out of 301 women in positions with prospects for promotion, of which 47 out of 112 were in white-collar positions with prospects for promotion.

The JFE Group places a top priority on creating working environments in which women can thrive. The company is not only working to increase its hiring of women, but also improving their working conditions. Consideration is being given to a wider breadth of areas to which women are assigned, along with other steps toward a greater range of roles women can play in the Group.

JFE Steel established the Diversity Promotion Section to empower new female hires.

**Employment of People with Disabilities**
To provide opportunities for people with various disabilities to fully exercise their capabilities, the JFE Group operates three special subsidiaries: JFE Apple East Corporation, JFE Apple West Corporation and Mie Data Craft Co., Ltd. The JFE Group will continue to promote the employment of people with disabilities with a focus on these special subsidiaries.

Although JFE Engineering and JFE Shoji Trade fell short of the legal employment ratio, they are promoting the employment of people with disabilities to ensure future compliance.

**Employment of Persons with Disabilities (June 2011–2013)**

**Passing on Skills and Reemploying Retirees**
With individual steelworks all expressing the desire to continue applying the valuable know-how of veteran employees, JFE Steel created a Senior Expert Program for retiring employees who reach the mandatory retirement age of 60. As of April 2013, JFE Steel had retired approximately 1,170 retirees under this program. Furthermore, the company is devoting significant time and effort to establish a program to help junior and midlevel employees improve their techniques and skills.

Retires support the program as instructors and pass on their knowledge.

Engineering also has a reemployment system to transfer the skills and project experience of veteran employees to younger generations. The company has established a wholly owned subsidiary, JFE Career Navi, to aid in the continued careers of such retirees.

To promote work sharing at JFE Shoji Trade, a reemployment system was introduced to enable retired employees to be rehired and work until the age of 65. In consideration of work-life balance, employees may choose from a variety of working arrangements, including full-time, shortened work weeks or shortened working hours.

In September 2012, JFE Engineering opened a company-operated childcare facility near its Yokohama head office in Tsurumi Ward. The preschool, called Children’s Forest, is located inside the JR Tsurumi Station building, which is used by many employees during their daily commutes. Hours of operation correspond to company hours.

**Promoting the Employment of Women**
With Japan on the verge of a massive generational change due to baby-boomer retirements, securing outstanding human resources is a key issue for the JFE Group. Both new university graduates and midcareer personnel, as well as foreigners and women, are being recruited from increasingly broader channels, in view of labor supply and demand conditions going forward.

**Human Resource Development**
In parallel with its expanded exports and overseas businesses, JFE Steel has been investing in the development of global human resources. To foster professionals well-informed in their various fields of specialty, the company educates people on-site in management and language skills. Increasingly comprehensive study and training also includes more opportunities for younger employees to go abroad. In FY2012, JFE Steel provided about 50 opportunities for overseas study and training, mostly for younger employees.

JFE Engineering, in addition to its personnel training, has adopted an internal recruiting system by employees’ appealing to optimize its allocation of personnel and make the most of their capabilities. In FY2012, the JFE Group introduced a system that allows employees not only to propose business opportunities but also to take charge of execution.

At JFE Shoji Trade, human resource development is regarded as a critical measure for the strengthening of organizational capabilities. Based on related principles adopted in April 2011, every year the company creates a training planning sheet for each employee to clearly define overall goals and individual training plans. Also, the company fundamentally reviews its education and training systems as well as conducts both on- and off-job training.
Employees

Positive, Productive Working Environments

Respecting Human Rights

The JFE Group, viewing respect for human rights as both a corporate social responsibility and a foundation of management, works to raise awareness of human rights among all employees. Specific examples include appointment of employees to oversee human rights education, implementation of human rights training courses, and guaranteed employment opportunities and promotion of fair human resource management.

Sexual and other harassment is prevented through measures including the establishment relevant work regulations, holding training, displaying posters, and setting up hotlines staffed by multiple men and women at each business location. Training also covers the prevention of power and other harassment. During Human Rights Week, leaflets with messages from senior management are distributed and employees are encouraged to submit related slogans.

Employee Health and Safety

Providing for the safety and health of employees is a basic requirement of manufacturers and fundamental to the continued existence of any company.

Based on its fundamental belief in the philosophy of “safety first” as declared by the company president himself, JFE Steel strives to enhance its safety measures through three key management pillars: promoting the autonomous resolution of issues in districts and workplaces, strengthening health and safety at Group companies and promoting mental and physical health.

JFE Engineering works to achieve safety through risk assessment and the promotion of mental and physical health at approximately 2,000 construction and other work sites of the group in Japan. The overall aims are to eliminate accidents and improve safety and health.

At JFE Shoji Trade, all employees participate in health and safety activities aimed at eliminating potential dangers under the slogan “creating an accident-free workplace through resolve.”

Disaster-prevention Measures

Drawing on the experiences of the 2011 Great East Japan Earthquake, JFE Steel is further strengthening its disaster preparedness. Measures include new evacuation procedures in the event of a tsunami, stockpiling emergency supplies of food, water and so on, strengthening company-wide command and control functions, and enhancing the backup of important data. Preparations are reviewed in line with national and local government studies, and capabilities are being enhanced through drills and other activities.

All employees at JFE Engineering have been issued a portable Earthquake Disaster Manual that specifies what employees should do during a major disaster.

JFE Shoji Trade has also developed manuals on damage prevention and initial responses to disasters, as well as related procedures for workplace managers. Also, a system has been established for confirming the safety of employees and their families during natural disasters. Going forward, the company will promote awareness and education to heighten daily awareness of disaster prevention and ensure that employees conduct themselves calmly in the event of unforeseen circumstances.

Health Management

The JFE Group carries out health management initiatives to ensure that all employees can fully exercise their capabilities while maintaining healthy minds and bodies.

JFE Group Initiatives

• Preventive measures for workplace-related illness, including improved working environments, appropriate work demands, and occupational health education
• Regular physical examinations
• Physical examination follow-up (counseling and adjustments in assignments, as required)
• Treatment and follow-up by partner hospitals and their networks
• Mental health care (counseling services, enhanced education of managers, care for those in need, etc.)

JFE Steel initiatives (besides above)

• Review of health-management measures at industrial physician meetings
• Hosting of case-study reviews by industrial physicians
• Operation of health management systems
• Achievement of an occupational health management system (expansion to occupational health management)
• Specialized healthcare advice
• Preventive measures against new influenza
• Measures regarding passive smoke (monitoring changes in legal requirements)

Employee Health and Safety

Providing for the safety and health of employees is a basic requirement of manufacturers and fundamental to the continued existence of any company.

Development of Dynamic Work Environments

Building Sound Labor-management Relations

The JFE Group works to build sound, constructive labor management relations.

Believing that honest communication is the foundation for sound labor-management relations, JFE Steel convenes the Labor-Management Business Discussion Committee four times a year to bring the company’s president and other executives together with labor representatives.

JFE Engineering, along with their Central Labor-Management Committees, creates additional opportunities for their presidents and other executives to share opinions with labor representatives.

JFE Shoji Trade management and labor regularly exchange opinions and share information based on joint declarations signed by the two sides to form bonds of deeper trust.

Dynamic Workplaces through Small-group Activities

Throughout JFE Steel, approximately 1,500 small groups carry out J1 Activities* for quality and work improvement. In addition, the JFE Family Result Reporting Conference, which includes participation from domestic and overseas group companies, is organized twice a year and groups selected through competition are given opportunities to go overseas as an incentive.

Similarly, about 200 small groups participate in J1 Activities* at JFE Engineering, bringing work units together to tackle key issues in the workplace.

Since October 2008, JFE Shoji Trade has implemented company-wide activities (J-SLIM) to improve work conditions. Efforts include system examinations and measures to improve management, work environments and line work.

In 2012, during the fourth J-SLIM presentation held at the Tokyo head office, 50 employees from three domestic companies, including JFE Shoji Trade, and two overseas Group companies, presented activities at the companies where they work.

* Activities to propel JFE Steel and JFE Engineering to the tops of their respective industries.

Faculty of Economics
Sophia University

1. Selecting Better Reporting Media

The JFE Group has been improving its sustainability reporting since 2002, when the first environmental report was released, by the effective application of different reporting media. This slow but steady progress has been achieved through a continuous process of trial and error, which is symbolic of the JFE Group approach.

The environmental report was integrated into the Business Report in 2006, whereas detailed environmental information was compiled in the Environmental Sustainability Report published on the corporate website. From 2008, the Social Performance Report was added, establishing a social and environmental reporting structure, and the Business Report became an integrated report that included only material social and environmental information. After that, sustainability reporting was separated from the Business Report in 2011 to prepare the CSR report. Last fiscal year, the CSR report was divided into three publications—a highlights version, a detailed version and a booklet of environmental data. This fiscal year, the JFE Group has attempted to create a PR magazine-style report without compromising the function of sustainability reporting, clarifying the roles shared by two different reporting vehicles: the CSR report evolved from the detailed report and a highlights version designed for a wider range of readers.

Sustainability reporting changes in response to social needs. The JFE Group’s report has also gone through many permutations in light of current needs, reflecting various possibilities from unique perspectives. I hope the JFE Group will steadily continue to realize further improvements going forward.

2. Expanding Reporting Scope

As the JFE Group improves its reporting methods, challenges in reporting become apparent. The most critical of these are reporting boundaries. Through the scope includes only three parent companies under the holding company, the report refers to other Group companies and an industrial association in addition to these three companies. This potential confusion should be rectified by refocusing the reporting scope on a financial consolidation basis. Another significant challenge involves progress management, which covers only environmental material issues. The scope of management should be expanded to include social issues. A financial consolidation basis. Another significant challenge involves progress management, which covers only environmental material issues. The scope of management should be expanded to include social issues. A financial consolidation basis. Another significant challenge involves progress management, which covers only environmental material issues. The scope of management should be expanded to include social issues. A financial consolidation basis. Another significant challenge involves progress management, which covers only environmental material issues. The scope of management should be expanded to include social issues. Further development reporting skills. For example, proper positioning of the Standards of Business Conduct would clarify the relationship between environmental and CSR management.

Furthermore, the Group’s highly promising range of environmentally focused technologies and ongoing related R&D activities are particularly noteworthy. In past reports, these technologies have been regularly introduced and their richness and variety always makes me surprised. These technologies are expected to make a great contribution to the establishment of a sustainable society demanding increased energy and resource efficiency. Moreover, it is also worth mentioning that these technologies have the potential to be drivers of further corporate growth.

However, reporting that provides an overview of the entire value chain is also important. The report should provide details on CSR activities within the supply chain and not focus only on contributions to downstream emissions.

3. Some Challenges in Reporting

As the JFE Group improves its reporting methods, challenges in reporting become apparent. The most critical of these are reporting boundaries. Through the scope includes only three parent companies under the holding company, the report refers to other Group companies and an industrial association in addition to these three companies. This potential confusion should be rectified by refocusing the reporting scope on a financial consolidation basis. Another significant challenge involves progress management, which covers only environmental material issues. The scope of management should be expanded to include social issues so that stakeholders can easily understand the overall function of CSR management. Also, transparency could be improved by further developing reporting skills. For example, proper positioning of the Standards of Business Conduct would clarify the relationship between environmental and CSR management.
In response to last fiscal year’s three-part report, which consisted of the Highlights Version, Detailed Version and Compilation of Environmental Data, many readers found the content easy to read and understand. For this reason, we decided to present the information in separate versions again this year. Furthermore, this year’s CSR Report provides additional detail and a special features section focused on the JFE Group’s post-earthquake reconstruction efforts and environmental technologies.

I have even greater hopes for initiatives targeting post-earthquake reconstruction and environmental issues. The pictures and graphics in the Highlights Version made it easy to visualize concepts.

JFE Engineering has a wealth of experience with geothermal power generation, both in Japan and overseas. Please see page 18 of the Highlights Version and page 46 of the CSR Report for detailed information regarding binary geothermal power generation, a cutting-edge technology that is also eco-friendly.

We received many responses to our CSR Report 2012 (environmental and social report). In this section we introduce some of the valuable opinions and thoughts received from readers.

Opinions

I have even greater hopes for initiatives targeting post-earthquake reconstruction and environmental issues. The pictures and graphics in the Highlights Version made it easy to visualize concepts.

I was left with a favorable impression of the JFE Group’s environmental protection initiatives. I can see that you have concern for the Earth’s environment and that you have been able to significantly reduce air pollutants and CO2 emissions from the past. Please continue implementing these kinds of environmental protection initiatives.

I am very interested in the potential of geothermal and other types of power generation.

I felt that I wanted to know more about your involvement in regional communities.

In response to last fiscal year’s three-part report, which consisted of the Highlights Version, Detailed Version and Compilation of Environmental Data, many readers found the content easy to read and understand. For this reason, we decided to present the information in separate versions again this year. Furthermore, this year’s CSR Report provides additional detail and a special features section focused on the JFE Group’s post-earthquake reconstruction efforts and environmental technologies.

As one of its most important environmental activities, JFE Steel continues to implement initiatives targeting global warming in line with the Low-Carbon Societies Implementation Project (2013–2020), an action plan lasting until 2020 that was formulated by the Japan Iron and Steel Federation. JFE Engineering also is engaged in activities such as demonstration testing of an innovative CO2 reduction method to store CO2 deep underground.

JFE Engineering has a wealth of experience with geothermal power generation, both in Japan and overseas. Please see page 18 of the Highlights Version and page 46 of the CSR Report for detailed information regarding binary geothermal power generation, a cutting-edge technology that is also eco-friendly.

We are engaged in various regional support activities. Six JFE Steel and JFE Engineering business bases hold events and sports classes for regional communities across Japan. Also, the JFE Shoji Trade Group donates desks and chairs to elementary schools in South Africa and cooperative support is provided to communities involved in steel through the JFE 21st Century Foundation.

Company Overview

Company Name: JFE Holdings, Inc.
Head office: 2-2-3 Uchisaiwaicho, Chiyoda-ku, Tokyo 100-0011
Tel: +81-3-3597-4321
Established: September 27, 2002
Capital: 147.1 billion yen
Shareholders: 304,266
URL: www.jfe-holdings.co.jp/en

JFE Holdings performs the key roles of strategic planning, risk management and external accountability as the holding company of the JFE Group, enabling Group companies to devote their full attention to the enhancement of competitiveness and profitability.

Consolidated Sales Breakdown

As of March 31, 2013
