Measures to Strengthen Protection Against Spoofed Emails

JFE Holdings, Inc. and JFE Steel Corporation announced today that from October 5, 2026, they will implement a stricter DMARC (Domain-based Message Authentication, Reporting and Conformance) policy to strengthen protection against fraudulent emails impersonating the Company, its executives and employees. This measure is intended to enhance email security by enabling recipient mail systems to detect and quarantine suspicious emails that falsely use the Company's domains.

1. Effective Date

October 5, 2026 (Japan time)

2. Applicable Email Domains

The enhanced DMARC policy will apply to emails sent from the following domains:

jfe-steel.co.jp	kr.jfe-steel.com
au.jfe-steel.com	sg.jfe-steel.com
br.jfe-steel.com	us.jfe-steel.com
cn.jfe-steel.com	mx.jfe-steel.com
in.jfe-steel.com	jfe-holdings.co.jp

3. Important Notice

Following the implementation of the new policy, certain legitimate emails sent from the above domains, including automatically forwarded emails and some system-generated messages, may be delivered to recipients' junk or spam folders.

If emails required for business purposes are incorrectly classified as spam, recipients are requested to:

- Add the relevant domains to the whitelist settings of their email security systems or mail servers.
- Contact the Company using the inquiry form below if recipient-side configuration is not feasible.

4. Inquiries

For inquiries regarding this matter, please use the dedicated contact form below.
